High Risk Returns Count

Data-Driven Actions to Reduce Returns, Maximize Margins & Retain High-Value Customers

1. Profitability & Discount Optimization

- **Data Insight:** High discount rates on certain categories are eroding profit margins without significantly driving sales volume.
- **Strategic Action:** Implement a strict **discount cap of 15%** across low-margin product lines, and shift towards **product bundling** instead of direct price markdowns.

2. Return Risk Mitigation (ML Prediction Model)

- **Data Insight:** Machine Learning models flagged a subset of orders with a high probability of return (High Risk).
- **Strategic Action:** Apply **pre-shipment quality checks** for high-risk orders and update sizing/specifications for top-returned items to manage customer expectations.

3. Customer Retention & RFM Segmentation

- **Data Insight:** A noticeable portion of the customer base is drifting into At Risk and Hibernating segments.
- **Strategic Action:** Launch automated **win-back campaigns** with targeted threshold coupons for At Risk customers, and build an **exclusive loyalty program** for VIP / Champions.

4. Inventory Management & Regional Focus

- **Data Insight:** Regional demand varies significantly, alongside stagnant stock in Bottom 10 Products.
- **Strategic Action:** Reallocate inventory geographically based on regional demand to optimize shipping, and initiate **clearance bundles** for slow-moving products.
